BARCODE NEWS - SEPTEMBER 2008

ZEBRA LAUNCHES THE G-SERIES DESK TOP PRINTERS

Zebra has announced a new family of printers which replaces the current range of 4 inch desk top models.

The G-series is based on five printers the GK420d, GK420t, GX420d, GX420t and the GX430t.

Each of these offer a number of factory installed options giving a large range of models which between them should cover most requirements.

Our initial offering consists of 17 distinct models. More are expected to follow!

A key point to note is that every model in the family can be used with both legacy desk top EPL based applications and ZPL which powers the large Zebra industrial printers.

ZPL provides a path to modern labelling applications, which might for example involve the use of scaleable smooth fonts, Unicode and even stand alone printer capabilities.

All of the printers work at 203dpi resolution with the exception of the GX430t which works at 300dpi.

ZEBRA GK420d DIRECT THERMAL DESK TOP PRINTER

The GK420d is a 203dpi direct thermal printer which prints on thermally sensitive media.

The G-series direct thermal printers are probably the smallest available.

We currently offer two models of the GK420d, one with USB and Serial communications and the other with USB and Ethernet.

For other fine barcode products visit www.decisiontechnology.co.uk

ZEBRA GK420t THERMAL DESK TOP PRINTER

The GK420t is a 203dpi thermal transfer printer which prints on both plain and thermally sensitive media.

The G-series thermal transfer printers house printer ribbons which makes them a little larger than their direct thermal counterpart.

Again we offer two models of the GK420t, one with USB and Serial connections, and the other with USB and Ethernet.

ZEBRA GX420d DIRECT THERMAL DESK TOP PRINTER

The GX420d is a 203dpi direct thermal printer which prints on thermally sensitive media.

It is the same size as the GK420d but is faster and has more options.

We offer four models of the GX420d, which arise from the choice of connections and the availability of a moveable sensor.

The two connection options are USB, Serial and Parallel, or USB, Serial and Ethernet.

The sensors are either fixed at the centre position or moveable across the media. The moveable sensor option is useful for where a black registration mark is printed on the edge of the under surface of labels or tags.

ZEBRA GX420t THERMAL TRANSFER DESK TOP PRINTER

The GX420t is a 203dpi thermal transfer printer which prints on both plain and thermally sensitive media.

It is the same size as the GK420t but is faster and has more options.

We offer five models of the GX420t.

As with the GX420d the first four models arise from the choice of connection options and the moveable sensor option.

The two connection options are USB, Serial and Parallel, or USB, Serial and Ethernet.

The sensors are either fixed at the centre position or moveable across the media. The moveable sensor option is useful where a black registration mark is printed on the edge of the under surface of labels or tags.

The fifth model is a standard GX420t printer which is fitted with an extra 8Mb of flash memory and a real time clock.

For other fine barcode products visit www.decisiontechnology.co.uk

ZEBRA GX430t DIRECT THERMAL DESK TOP PRINTER

The GX430t is a 300dpi thermal transfer printer which prints on both plain and thermally sensitive media.

It is slower than the GX420t but the printed resolution is higher and is good for labels which contain detailed graphics.

The GX430t is the same size as the GX420t and we offer four models arising from the combination of the connection options and the presence or otherwise of the moveable sensor.

The moveable sensor option is useful where a black registration mark is printed at the edge of the under surface of labels or tags.
